Description

Username rename in trackers doesn't work when there are multiple values.

Solution

Hello!

I solved this issue modifying the function change_login located in the lib/userslib.php file.

This is the output of the svn diff:

svn diff

Index: lib/userslib.php

```

Hello!

I'm trying to get access to the admin panel but I can't with the user "admin" password "admin".
What username and password should I use?

Jonny Bradley 01 Jun 17 19:17 GMT-0000

Hi Andres

The admin password for all show instances should be 12345 (yup, that seems to work 😊)

Enjoy!

Andres Valero 01 Jun 17 19:22 GMT-0000

Yes, that's it.

Thank you! 😊

Victor Emanouilov 08 Aug 17 06:46 GMT-0000

Hi Andres,

Patch looks good. May I only suggest you use the getter/setter methods used in other places for multiple user selector field, you can check lib/core/Tracker/Field/UserSelector.php for examples. Using implode/explode will fail for usernames containing a comma or some special character.

Get values out of the user field

```
TikiLib::lib('trk')->parse_user_field($res['value']);
```

Save array of usernames back to the user field

```
TikiLib::lib('tiki')->str_putcsv($values);
```

Marc Laporte 17 Apr 18 04:34 GMT-0000

@Andres: we need your SourceForge username

Marc Laporte 06 Jan 21 17:04 GMT-0000

Now in 21.x, 22.x and trunk
