Slideshows can only be done based on a page and its headings. The proposition is to be able to do slideshows based on structures (without having to move through a structure and select slideshow on every page).

I've added a few lines (130-148) on tiki-slideshow.php and attached it.

Please demonstrate your bug on show2.tikiwiki.org

Interesting!

I suggest:

- get commit access
- Make it optional: Create a new preference
- Add to Tiki trunk so it becomes an official feature in Tiki18

What do you think?

P.S. FYI PDFs from structures will be added any day now. PDFs can be used for slideshows too
