### Description

PluginPivottable: selecting controls in pivotui are not stored when plugin saved (choosing variables in rows and columns).

To reproduce, login as admin here:

Edit pivottable example with the button at the bottom right corner of that pivottable drag and drop some variables in columns and rows, and save. You should keep your new pivottable displayed as you selected when the page reloads, but it's not, your selections of columns and rows is lost.

That was working as expected in 16.x

### Solution

Seems to be fixed in current Tiki18 at least. Closing ticket.

Hi Xavi, I confirmed the bug but I cannot SVN up the instance (it seems it does not work). Can you reproduce this on Tiki 18.x as well?

Cheers,  
luci
