Description
Registrations set to require validation by admin do not send email to configured email addresses any more. It use to work as expected, as far as I know, in 15.x

We have set the 3 email addresses separated by commas, as indicated in the Tiki UI, in case it matters, to receive the emails warning about a validation is pending

That's odd Xavi, it's working fine on tiki.org, and the code definitely expects comma separated emails.
I just tested on my local 17.x and it worked fine (in fact i get two validation emails to each address, one before the user tracker item is created and one after, another known bug which would be hard to fix without breaking something else)
Might be worth a show instance?
