Description
    It is not possible to use tiki-batch_upload_files.php to sent file into a file gallery (directory storage).
    The process seems to run but no files are uploaded (and removed).

    I found a workaround, check any of the checkbox at the bottom :

- Upload into galleries according to sub-directories
- Use the last sub directory name as description

    And it work (even when there is no subdirectory)

Solution
    Not relevant anymore

Can you double check this please Bernard?
It just worked fine for me here and the other day on a remote server with neither of those checkboxes set.
Also i can't see how it could fail from the code..
Could you try it on another 17.x maybe? (i know we can't do a show instance for this, sadly) Maybe that server has some other problem?
