### Description

I can select a theme stylesheet, apply it to the site, view the stylesheet , and edit the stylesheet. Checking the stylesheet update time, I can see the the edit took place, and I can find the updated CSS in the file. But, the site continues to use an unedited version of the stylesheet, it seems. A DOM inspector shows that my edit didn't take place (I changed the body font-size property from 14px to 16px). There's no visual evidense of this change in the page appearance.

What's worse, I can no longer change the site's theme. Using the Look & Feel selector, I can select another site theme, but the switch-theme module, which overrides the site default, can't be used (the selector dropdown is disabled in the HTML). So the theme that I edited (although in its pre-edit state) is stuck as the theme in use.

This feature should be fixed, or else killed, and people directed to use Custom Less or Custom CSS instead, IMO.

### Solution

Apparently edit CSS works normally and my experience of was due to caching or sessions issues locally, so I'm closing the bug report.

I changed the CSS under look-and-feel-> Customization -> Custom CSS and was not able to reproduce this. It all seems to work well on my end. Tried in 17 and also trunk.

Gary Cunningham-Lee 30 Aug 17 05:47 GMT-0000

Yeah, I checked my test site today and now see the CSS edit has taken effect, so apparently some caching or session issue was causing the problems here. I'll close the bug.
