- 🟡 H5P Collage Flies out of Constrained Area in Cached Wiki Page

### Description

The PluginCarousel seems to be behave quite poorly with any combination of parameters applied, I have tried to add a carousel to the top of a wiki page, I have tried to constrain the Carousel within a Bootstrap grid fluid container and regular container and it seems no matter what I do, the Carousel fly's out of the containers, and main body area and into the rest of the page. Using basic syntax as:

```
{carousel fgalId="6"}
```

I would think it should work out of the box, but I can't seem to get the correct combination of commands to make the carousel work.  
Please see show instance.

John, you could try this code in a page for a carousel display (PluginList will need to be activated, if not already, and the gallery\_id number set to whatever gallery you're using, in the first line):

```
{LIST()} {filter field="gallery_id" content="1"} {OUTPUT(template="carousel")} {carousel interval="6000" wrap="1" pause="hover" id="mycarousel"} {body field="pic" mode="raw"} {caption field="caption"} {OUTPUT} {FORMAT(name="pic")} {display format="wikiplugin" name="wikiplugin_img" fileId="object_id" styleimage="width:100%"} {FORMAT} {FORMAT(name="caption")} !!! {display name="title" default="Untitled"} {display name="description" default="" } {FORMAT} {LIST}
```

Gary that worked very well, I created a page at the show instance named List Slider Gallery, see it if you'd like. I do have a question, is there any way the images can link to a page or offsite url? And can we bring the controller arrows down to the middle of the slide?

This works really well, thanks sir and i appreciate your time. So that is a cool workaround, is there a chance that Carousel will ever work properly?

Thanks again Gary!

Gary Cunningham-Lee 03 Jan 18 07:24 GMT-0000

Seems like the developer energy these days is going into the Plugin List slider, but about the others, if

they are still included in the code, they should be maintained and work correctly. I did a comparison about a year ago, details here: <https://dev.tiki.org/Slider+comparison> , toward deciding which to remove and which to continue supporting. There should be a discussion and decisions ASAP.

John Morris 03 Jan 18 12:38 GMT-0000

Gary, I gotta say, as much as I like the results you provided me, I never would have been able to figure that "list" plugin out, just waaay too many variables to learn and code to make it work, it overwhelms me actually. If Tiki wants to head towards a user friendly interface, then getting rid of the plugins that prompt the user to fill in fields to make what they want, is a big mistake I feel. I am always looking from the standpoint of a casual user who wants to contribute content on my wiki, to expect them to learn the list functions to generate a slider or carousel I feel would be expecting way to much and could quite possibly generate frustration and lack of contribution.

I am going to learn the list functions, because I feel I need too, in order to get content to display as I want, but I hope we can still have some way to generate a simple slider or gallery to display by plugin prompts or fields.

I have been working with H5P and it's a wonderful addition to our tiki, thank you tiki gurus! But just like anything it has upsides and downsides. Even though Carousel and Gallerific does not work, the functions they are supposed to offer are pretty complete and robust. If they would only work. Thanks again Gary, I truly wish I could help here, from a developer standpoint, but who I am does not consist of developing knowledge, I can only stand on the backs of those smarter than myself to make my website, and I can complain and give attaboys and suggestions, it's not where I would like to be in this project, but it's all I got at this point.

Gary Cunningham-Lee 03 Jan 18 15:48 GMT-0000

Working with List Plugin code by hand to produce a carousel isn't expected to be the final answer, it's just a step along the way. Just like you, our goal is to have an easy to use plugin (just fill in the form, etc.) to produce carousels and other page parts. There's a GUI under way to provide a graphical interface to create the code for List Plugin instances - see <https://doc.tiki.org/LIST---Graphical-User-Interface> (not much there yet - it's my task to document that and I'll add details as I get info and understand more of it ;-)).

John Morris 03 Jan 18 20:28 GMT-0000

Gary, I checked out the GUI and that is a great start!!!!!!

John Morris 03 Jan 18 03:26 GMT-0000

trash post

John Morris 03 Jan 18 12:42 GMT-0000

by the way Gary, I was able to bring the arrows down to the middle of the slider by adding this:

```
[role="button"] { cursor: pointer; padding-top: 15%; }
```

I used it at the show instance and it works well on all size viewports.  
And thank you for the slider comparison chart!

Marc Laporte 22 Jun 18 02:12 GMT-0000

<https://doc.tiki.org/PluginSwiper> is coming to Tiki19.

This will be better than all the other sliders

<https://doc.tiki.org/Slider-Comparison>

<https://dev.tiki.org/Slider-comparison>

Yes, I know about <https://xkcd.com/927/> 😊
