Description

> The wysiwyg_wiki_parsed preference influences WYSIWYG edition, even if it was not supposed to.
> When it is enabled, what one sees in the WYSIWYG HTML (wysiwyg_htmltowiki disabled) editor is
> not necessarily what one gets. For example, if one enters "__Text__", "Text" will be displayed in bold
> after parsing, the underscores parsed as if the page contained wiki syntax.
>
> This issue persists in trunk as of r65130. Moreover, following r30245 (2010-10-23), this behavior is
> "specified" by the editor's help. So fixing this may be considered as a semantic change for existing
> data. A simple fix without data conversion could disappoint user expectations. Plus, HTML
> WYSIWYG does not have equivalents to some wiki features, such as plugins.
>
> Ticket #6532 reports a corresponding bug when wysiwyg_htmltowiki is enabled.
