Description

The WYSIWYG wiki editor (feature_wysiwyg enabled) allows typing HTML tags. But if "Use Wiki syntax in WYSIWYG" (wysiwyg_htmltowiki) is enabled, this HTML is not interpreted, just displayed literally.

This does not work however. As soon as the editor switches to Source, or saves the page, an attempt to convert all HTML markup to Tiki markup is done. This conversion is lossy and loss is quiet. For example, if I have...

```
<table><caption>Title</caption><tr><td>Value</td></tr></table>
```

...it will be converted to...

```
||TitleValue||
```

Unsupported tags are apparently just removed.

Strangely, if one copies a string with HTML in the WYSIWYG textarea and pastes it in the same area, the paste shows the result of interpretation (the HTML tags are no longer displayed literally).

Ticket #6523 reports a corresponding bug when wysiwyg_htmltowiki is disabled.
