-  Deleting the last version of a Wiki Page doesn't return the contents to the previous version's content
-  Deleting the last version of a Wiki Page doesn't return the contents to the previous version's content

Description

Attempting to remove a page fails by default, without reporting any error. Before Tiki 18, it seems to do nothing or little. Since 18, it merely removes the last version of the page.

When the "Remove all versions of this page" is checked, removal works.

Workaround

upgrade to Tiki 21 LTS where it seems to be fixed, as I could see in the show2 instance I created to check it.

(or test again in Tiki18 LTS (still supported, afaik) to see if the issue is still in there)
