### Description

I'm setting up TikiWiki for our company intranet and have noticed that in the Search Results, all the entries are displaying a date far into the future. But when I check on any page's history list, the dates are ok. See graphic:

I have contacted my service provider and they say it's a software issue.

I have set and reset my Date Time option to various time zones as well as resetting to default - still displays into the future.

Running v15.4
