Description

InterTiki stopped working on this site properly. Users and the groups are not being replicated anymore. When someone registers on tiki.org, the user does not appear here. For example on tiki.org there is registered validated user samymwamba, but if you check here the user is not found on <https://dev.tiki.org/tiki-adminusers.php>

Did samymwamba ever log here?

I thought the replication is triggered by logging? Or is that only the case for LDAP logins?

luciash d' being 07 Apr 18 09:17 GMT-0000

Ah, I didn't know that. I thought it is done on some regular basis (cron or similar).

I will ask him to log in here and see the results if his user is replicated properly including groups etc.

Thanks!

luci

Alright, confirmed the user replication via Intertiki works (thanks @Samy mwamba for testing!) on first user login on the dev site.

The groups seem to be transferred properly, there is this little difference for user samymwamba though: tiki.org:

Registered (default)

Team Developers

dev.tiki.org:

Registered

Teams (Included)

Team Developers

Not sure why it is so but closing this task as the main feature seems to work properly... (sorry for the false alarm)
