Description
    Since I upgraded some site to Tiki 18.x (svn), I can't edit properly wiki pages through the mobile
    phone (using Chrome on Android, in case it matters).

    Once the page is open for edition, copy & pasting some url from elsewhere (for example) get your
    url appended with some extra text each time you click elsewhere in the same edit, or even if you just
    hit at the save button afterwards.

    If you disable codemirror highlighter for the time being in that edition, then no extra text is
    prepended and you can save as expected.

    ───────────────────────────────

    Similar issue still present in 20.x

    Reproduced with an android based device (using chrome) in:
    http://xavi-9794-6662.show2.tikiwiki.org/tiki-index.php?page=HomePage
    visit with mobile device, enable codemirror highlighter, and attempt to edit the text.
