- ✖ Wish: navbar height offset input as a L&F admin option

Description

In trunk now (to be Tiki 19), with the update from Bootstrap 3 to 4, navbars have more styling flexibility. Regarding foreground (text) colors, instead of having CSS classes `navbar-default` and `navbar-inverse`, there are now `navbar-light` and `navbar-dark`, and also `navbar-primary`. And for background colors, there are `bg-dark` and `+-bg-light+-`.

So it would be good to implement admin L&F preferences/selectors to specify the background and foreground colors that the site uses for its main navigation navbar, and add switches in the code to put the CSS classes in the navbar HTML.

Themes should support all three color variations by specifying appropriate colors, etc.

Solution

This is addressed with CSS variables and related changes in the .tpl files in Tiki 25 and 26.
