Description

On a fresh install with version 18.1

-I want to use Categories to restrict access to images and files

To do that, I created a category "CAT_1" and placed "IMAGE_1.JPG" in that category.

Then I created a group "GROUP_1" (inherited from Registered) and placed "USER_1" in it.

Now about permissions:

I removed ALL the "Files Galleries" permissions from global permissions on both groups, Registered and GROUP_1.

When I did that, USER_1 stopped being able to see the files on the wiki.

Then I changed CAT_1 permissions (according to the page, it overrides the global permissions) to ALLOW USER_1 and Registered to see the Files Galleries. I was expecting to see the file IMAGE_1.JPG that is in CAT_1, but USER_1 continues to see nothing.

I am including tiki_p_download_files when I make changes on the permissions.

I am clearing the cache after the changes.

I expected to allow USER_1 to see only the images under CAT_1, but when I make the changes above, it stops seeing al the files
