Description

Hi,

I set TrackerFilter to text search a field ('text with wild characters') on an address field. However, it seems that since this field is 'Item Link', it does not find anything. I tried setting 'index remote field' in the Items List parameters, re-indexed, did not help. Maybe some other parameter I missed?

I went to the related tracker that the 'Address' field was linked to, I exported it. found the entry I needed (150 Main street) found the item id, 2673, entered it into the TrackerFilter text search for that field and it found all the entries with that address.

Any way this can be made to work with normal search parameters?

thanks,
Mike

you can user PluginList and filter for the "_text"-value of the item-link field. That should work.
e.g.: {filter field="tracker_field_internalFielName_text" exact=""}
