Description

<https://dev.tiki.org/Wiki-Syntax> is broken and I'm not sure what was expected here.

The page title is Wiki Syntax.

It show items from the tracker "Wishes" filtered on the field 109 that doesn't exist.
(Seems they were confusion with category 109 = Wiki syntax feature).

The situation is now quite different (no errors), but it remains broken.

It is breaking the site layout because one tracker item contains the `..page..` syntax in code which should not be rendered (but it is).
