Description
In safari, when placing a pin on a map, the pin appears in a diffrent location from where the pin is placed.

Steps to reproduce.

Add a location field to a tracker
List trackers -> Create
Zoom a little on the map so you can see the pin location difference.
Drop a pin on the map.

Safari version: 11.0.3

Trunk, (future tiki 19)

I have also reproduced this same bug with chrome as well, so it's no longer browser specific. It relates to scrolling down the page. When you scroll up and down the pin location also moves.

Sorry to troll...

I use map and tracker location field and markers on a 18x.
Since a month+ the map layers are not working anymore (the map is only a alignment of question marks).
Work fine on Chrome or Firefox.

It works for you ?
