- ● Tiki community HomePage show a "Data too long" error

Description

I was willing to test some feature in recent 18.x compared to trunk. Trunk worked fine, but 18.x complained with:

"Data too long for column 'log' at row 1"

The query was:

```
insert into `tiki_actionlog` (`action`, `object`, `lastModif`, `user`, `ip`, `comment`, `objectType`, `client`, `log`) values(?,?,?,?,?,?,?,?,?)
```

Steps to reproduce in 18.x: brand new install (r67615). MyISAM in db type.

- Login as admin, change pass
- Profiles Wizard > Demo of Interesting Use Cases > Bug Tracker
- click again in the profiles manager, since the profiles wizard didn't succeed showing you the button to apply the profile.
- next page shows that error message:

Btw, profile seems to have been applied successfully.

I get the same error when trying to upload files to a file gallery at tiki.org, if the file name is "too long" (that's in quotes because the name is not particularly long). There is no warning on the upload screen that "long" file names will cause the upload to fail. If a group of files is uploaded together and one has a "long" name, all file thumbnails will show "upload failed" but I later found that the "short" name files did in fact upload, which was also inconsistent behavior. Also, editing an already uploaded file name in a way that makes it longer results in a WSOD, no error message.
