Description
On Tiki19

Last update from SVN (19.0svn): Thursday September 27, 2018 12:59:03 IDT - REV 67702 (InnoDB)
I create a first tracker after enabling the feature.

It show the following error:
Field tracker_id does not exist in the current index. If this is a tracker field, the proper syntax is tracker_field_tracker_id.

It shouldn’t show and error.
Eventually an info about re-indexing but would be better to do the job (first tracker is likely to be done by a new guy).

Solution
Fixed with:
19.x: r67867
trunk: r67868

The issue was not the error message but the fact that tracker properties page searched for the list of tracker fields to display a select element while there were no tracker fields in the search index - this means the tracker_id column was not in the search index and thus the invalid query. We now ignore such query errors that don't make sense to display to the user - returning silently an empty list of fields is all we need in that situation.

I agree it's bad.

It was added to help other cases where it's a real error. Let's try to find a solution that
caters to both use cases.
