Related-to

- ● Incompatilby between Find and tablesorter on tiki-listpages.php
- ✖ tablesorter conflicts with the search module searching on pages (tiki-listpages.php)

Description

See for example <https://nextthemes.tiki.org/tiki-listpages.php?cookietab=2#tab2> (next/next for auth) or https://themes.tiki.org/tiki-listpages.php?cookietab=1#contenttabs_wikipages-1

Solution

Was fixed by Amna - a misplaced div closing tag probably introduced in the Bootstrap 3 to 4 update of find.tpl.

Locally, I commented out the include for find.tpl and tiki-listpages displayed normally. I updated the layout of find.tpl for Bootstrap 4 a few days ago but checked for matched divs, etc. at that time and things looked ok. I checked again after this report and didn't find any problem. Strangely, I reformatted find.tpl (in PhpStorm) to see the divs and if statements more clearly, and after that tiki-listpages (with find.tpl included as usual) displayed ok. So I committed the reformatted file and we can check if it makes any difference at the themes sites.

Gary Cunningham-Lee 07 Oct 18 17:37 GMT-0000

Here's a clue: the page layout is ok if Tablesorter is not activated. If Tablesorter is activated, the page layout breaks due probably to a div tag mismatch. But tiki-adminusers.php, which also uses Tablesorter, displays normally.

Bernard Sfez / Tiki Specialist 08 Oct 18 07:33 GMT-0000

Gary, nextthemes is already on trunk, is that what you are looking to ?

Checked on themes (now on Tiki19) the content of the page stop too short (like to preserve a phantom col 3 space).

I see for #col1

```
class="col col1 col-md-12 col-lg-9 order-md-1 order-lg-2"
```

This col-lg-9 for large screen should be col-lg-12 (as there is no third col).

Gary Cunningham-Lee 08 Oct 18 10:47 GMT-0000

I'm looking at themes.tiki.org, running 19svn. I haven't been checking nextthemes since themes.t.o was updated to branch 19.

Well, .col-lg-9 is actually correct because there is a second column on the page, but it is displaying down below .col1. When you check the inspector view like in your screenshot (further down in the page), you can see .col2 is actually inside .col1; that is, the div closing tag of .col1 is below the .col2 code. Somehow the div tags are messed up (when Tablesorter is active). And of course the tabset is messed up (tab 2 is inside tab 1 content) because the Tablesorter lines are inside tab content 1.

There aren't changes from branch 18 to branch 19 in tiki-listpages.tpl that would cause the page to break - there's only some form layout updates which I checked again already. So the problem is due to something being included in tiki-listpages. If you turn off Tablesorter, the page isn't broken anymore so that is suspect but other pages with Tablesorter display ok, so what makes this instance different?

Bernard Sfez / Tiki Specialist 09 Oct 18 07:36 GMT-0000

Thanks for your detailed explanation Gary !

amna.bilal 15 Oct 18 19:07 GMT-0000

Fixed, at 19.x : <http://sourceforge.net/p/tikiwiki/code/67997>

Automerged at trunk: <http://sourceforge.net/p/tikiwiki/code/67998>

Issue was with find.tpl, wrong placement of conditional check was leaving one div un closed, with tablesorter, causing whole tpl to break.

Marc Laporte 18 Oct 18 00:21 GMT-0000

Does it apply to 18.x?

Gary Cunningham-Lee 18 Oct 18 01:20 GMT-0000

No, I think the problem was caused by me when I was doing the Bootstrap updating of find.tpl for branch 19. :-/
