Description

I noticed this while using the tiki reference plugin. Thought it was something in the plugin creditor interface that was broken, but I now see that the plugin was successfully added. So there is nothing functional broken. However. The UI surrounding the adding of a plugin is certainly broken.

My original report:

Adding a tiki reference appears to be broken now. I get as far as adding a reference, but when I try to create one it just hangs on a grey screen. Then nothing.

Steps to reproduce:

Enable "Wiki references" preference

Edit a wiki page

Click the "Add Reference" icon

Add a Biblio Code and click save.

The screen now "hangs" on a greyed out screen.

I think if you check in the js console there is a bad js error that breaks the page - i think these plugins need rewriting properly (from last time i checked)
