Description

When I try to edit: <https://doc.tiki.org/Items-List-and-Item-Link-Tracker-Fields>

I get a 500 error.

When I try to edit and save a page on <https://tiki.org> I get a WSOD. Is it the same issue?

Solution

"updated mysql, ran a database index fix, cleared caches, updated tiki org, updated the linux kernel and rebooted."

I got a WSOD when trying to save my edit on tiki.org (The TAG Meeting page) 😞(I saved my edit locally till fixed)

It really disrupt our capability to work.

New clue... or new bug.

Look at the modification date. I sorted it in the lastmodification ascend order but on the screen the date

are not ordered properly. However, I think it shows correctly the order for the page we tried to edit.
(I just try to edit the 1-click installer page and the save failed).
