**Description**
Firstly, congrats there seems to be a marked performance improvement when running tiki-stats.php in v18.3 over v15.7.

We are seeing two issues with the new tiki-stats.php on our upgraded system.

With v15.7 the statistic "Day with the fewest pageviews" reported only a single entry, which was the FIRST date on which the lowest number was seen.

With v18.3 the same statistic now seems to report EVERY date on which our system has had minimal activity, which is making the page extremely long. This issue of increased page length is exasperated by the repeating of some dates.
My wish would be to have only the first and most recent day with fewest pageviews reported within tiki-stats.php

If the full list is useful to others, then perhaps it should have its own page linked from tiki-stats.php

I've rated this with importance 5 as we use this feature on a daily basis to see what the activity has been over the past 24 hours, but recognise others may never use it.
