This is user error on my part. The fields to fill out at the External Wikis page are:

Name
URL
Index

I had them set as:

Name - Wikipedia
Index - wp

Apparently the correct way to do this is:

Name - wp
Index - wp

And that seemed to fix it, I was confused with the first field "Name", I just assumed that was the name of the wiki being linked to, and the only location to insert "wp" would have been at "Index". It may confuse others too?

But it does work.
