Description

When the wrong URL is entered, such as when an admin page URL is miss-typed, instead of a
normal 404 error, this is displayed: "No route found. Please see
http://dev.tiki.org/URL+Rewriting+Revamp". Many people who see this will have no idea what it
means or what to do with it. Can this be replaced with something more user friendly, like "Error: no
page found. Please check the spelling of the URL."? Can it be done within the Tiki interface and not
be an empty unformatted page with that one line of geeky text?
