Hi,

I'm logging this bug as requested here - https://tiki.org/forumthread71548-Unable-to-insert-images-directly-from-file-gallery#threadId=71556

I've recently started using tikiwiki and I'm rather satisfied with it so far. I do have one issue I haven't managed to fix as of yet though.

I'm running version 19.1

I don't seem to be able to insert images from the file gallery.

For example - Let's say I'm editing a wiki page, if I click on the toolbar icon to insert an image or file from the file gallery, and then click on an image or where it says "Click here to use the file" - the file gallery pop-up window jumps to the top of the page without having actually done anything. No image code has been inserted into the wiki article.
If instead of choosing an existing image in the file gallery I upload a new one - this does insert the image code into the wiki article, it just doesn't do it when I'm choosing an existing image.

So far I've just been manually entering in the code I need + the image ID, but naturally it'd be my preference to get the "click image in file gallery > it adds the code to wiki article" working.

Yes, same action with my Tiki19 as well. Thanks for the report!
