Description
I added a note here on doc after having to debug the code on an 18.x site because we couldn't get a user tracker and group choice to work together on registration at the same time.

It wouldn't be hard to check the inherited groups on the group choice until we find the one with the tracker set, in this case Registered.

Meanwhile at least there is a workaround.

Workaround
As documented on doc:

❝

> *Note Two: As of Tiki 18 at least, if you have a user tracker assigned to the Registered group and you use "Choose Group" you need to replicate the tracker and field settings on each group you offer as a choice. The groups need to have "User Choice" set too.*

This is a regression.
A tracker with registration='y' and field=<my group field> may be an acceptable workaround.
