Description
Upgrading from 18.3 to 20.x did break my WYSIWYG editor.

Found the origin of this bug:
Select on Control Panel "Wysiwyg" for setting "Full WYSIWYG editor skin" one of the non-default skins.
Results in non loading editor (only shows for short time a loading bar) when editing a Wiki page.

Workaround:
Select "Moono (default)" as editor skin.
