Description
On previous version of a Tiki (17 and 18) and as per documentation at https://doc.tiki.org/Favicon it is possible to set a favicon using the favicon feature.

This is not working with Tiki20.

Using a favicon checker it shows the usual Tiki instead of the new favicon and show:
`http://blabla.com/themes/greenvalley/favicons/favicon.ico is declared but not accessible`

The browser path for favicon is now: "/themes/base_files/favicons"

To have unique favicon for Tiki20 by erasing the content and place your own favicon files.

Solution
Retested on SVN (20.0svn): Sunday June 16, 2019 19:04:34 IDT - REV 70218
Updated process:
At : https://realfavicongenerator.net
Change the following settings;
Path set manual : /themes/yourtheme/favicons
Once you generate your favicon package;
Insert the code in the <head> section of the Tiki using Layout/Customization
Paste the content of the package inside /themes/yourtheme/favicons

Work on Firefox
