Why the display is broken and no css is shown there? (it reminds me of cases where php memory was exhausted, even if this is a pretty simple use case in a fairly standard ubuntu 18.04 server which should have 128Mb at least to start with, if not 256Mb )

Re: Related to "PPM" (keyword for Marc)

Workaround
Looks like it's the currency field and probably it's because it doesn't have a "currency tracker" set on it.... ok i think i found it - lib/smarty_tiki/modifier.money_format.php:50 uses the class NumberFormatter which depends on the php ext-intl, which seems to be missing from show2 😞

Added that php module top show2.t.o, and error is gone. Thanks! 😊
