Description

dev.t.o: form to search for related-to bugs became recently broken

I could use it yesterday with no problems, while reporting this bug:
<https://dev.tiki.org/item7133-CSRF-False-positives>

which is linked to a couple other items.

If I edit that item now, I can't search for other items against CSRF, for instance (while previously linked items are still linked there).

New bug reports do not allow to search for related items when you edit the bug report.

Something has changed in the last 24h? (some svn up? some config changes somewhere?)
