Description

I was getting timeouts when installing mPDF package through the web interface. So I switched to the CI and tried it there. I also got a timeout error with the following message:

```
The process "'/Applications/MAMP/bin/php/php7.2.14/bin/php'
'/Users/drsassafras/Sites/trunk/temp/composer.phar' 'no-ansi' 'no-dev' '--prefer-dist' 'update' '-d'
'/Users/drsassafras/Sites/trunk/' 'nothing'" exceeded the timeout of 300 seconds.
```

That makes sense why the timeout happened! I am running trunk with the dev packages and removing or adding them takes quite a bit of time.

Could packages check that one is not running a development environment before deciding to uninstall all those composer packages?

Easy to solve?

10 easy
