Description
I'm wondering how to expose the param zoom Level (as seen here: https://github.com/robicch/jQueryGantt/blob/master/ganttZoom.jsmarc ) to the Tiki PluginGanttChart, so that in real world scenarios where we have lengthy tasks across several years, we can have a nicer default view for decision makers.

Any hints?

You can get a working instance to start with by means of applying the GanttChart profile.
