Description

If you follow a notification link to comment (e.g. on a tracker item) and you then reply or add a new one the #threadId=42 value stays on the url and you get scrolled to the initial comment again, not the one you just added (does that make sense?)

Yes it makes perfect sense Jonny 😊 It should link to the currently submitted one I think too. BTW, any idea when I want to access your show instance I get "TIKI INSTALLER SECURITY PRECAUTION" screen?
