

Here is a screenshot of how it is currently, and correctly, displayed in Tiki 18.4:

Thanks,
Mike

UPDATE Jan. 04, 2020:

- I discovered a deeper problem resulting from the incorrect pop-up format:

This screenshot is displaying a pop-up of an Item Link field that should be in Table format, however, each of the columns (as well as the content) is being displayed in vertical (written) format, completely unusable.

Hi,

any dev's willing to help out?

thanks,

Mike

Mike Finko 04 Jan 20 18:50 GMT-0000

Just added a 4th screenshot of a deeper issue displaying an Item Link field in the pop-up (description above labeled the 'UPDATE Jan. 02 2020').

I have several sites that are displaying unusable data like this (reminder: as describe above, this occurs when using TrackerList on wiki pages)

Benoit Roy 14 Jan 20 23:10 GMT-0000

<https://sourceforge.net/p/tikiwiki/code/75238/>

Best i could do is widen the popups for wiki pages only. Not sure if it will help for your last issue.

Mike Finko 15 Feb 20 11:48 GMT-0000

adding Victor (as 'Keep Informed') - not a front-end developer, but important he is in to loop to understand the usability issues of this configuration.

Viewing Item Link Fields in Pop-ups in Table Format is very important, because when this type of field is added directly to the TrackerList, it can make the rows extremely tall, e.g. unusable (like using a spreadsheet with rows that have height of 50, 80, 100+, which can easily take up half or all of the monitor)

Gary Cunningham-Lee 15 Feb 20 16:55 GMT-0000

Could you make a show instance to demonstrate the problem, or provide a URL where it can be seen? I'm not sure how to reproduce the problem, and don't have a site set up to reproduce it, as far as I know.

Mike Finko 16 Feb 20 16:46 GMT-0000

yes, will send you a link by email.

Gary Cunningham-Lee 16 Feb 20 07:57 GMT-0000

Would it make sense to use a modal instead of a pop-up/popover for big-content situations like showing tracker item details? The size is more appropriate, with .modal-xl having a default 1140px wide, for example. And modals by design can have more complex content than popovers are designed for. Just a thought.

Jonny Bradley 16 Feb 20 16:09 GMT-0000

On mouseover? 🤖

Gary Cunningham-Lee 16 Feb 20 17:23 GMT-0000

Yeah, unusual maybe, but a small popover stretched to a large size also goes a ways beyond what it was designed for AFAIK. A couple of examples but I didn't check about dependencies or anything:

- <https://mdbootstrap.com/snippets/jquery/bartek-malanowski/226737>
- <http://jsfiddle.net/gabelloyd/721u3sfh/>

Anyway, just brainstorming a bit. It's true that popovers have the arrow that provides the visual connection to the link they're opened over, which modals don't have, and I think moving down a series of items and having popovers open and close is a better experience than having modals open and close would be (that seems like it might make a pretty chaotic impression). Really the only thing modals have over popovers is their size and design for more complex content; probably that's not enough to justify trying to use them in this situation.

Mike Finko 16 Feb 20 16:48 GMT-0000

I agree that a huge amount of text in a mouse-over doesn't look

great, and, may not be the best design. I've only recently heard of 'Modals' is there a plugin for them?

Gary Cunningham-Lee 16 Feb 20 17:39
GMT-0000

You've seen modals used in Tiki, like the help dialog when editing a wiki page, or when configuring a tracker, adding a field, etc. Here's the Bootstrap doc page:

<https://getbootstrap.com/docs/4.4/components/modal/>.

There's no modal plugin, although that would be nice to have.
