Description
When you use file gallery (or image gallery, doesn't matter) and the image plugin to add images to Wiki text, you almost always want text flow around images, using the parameters align=right | left.

And you don't want to have text flush to the image. To add space between them, you use hspace and vspace parameters.

But: hspace is always applied, even if the image is positioned left of the text or right of the text. It would be an improvement if no hspace would be added when there is no adjacend text, i.e. at the side where the image is standing. This would make it look more professional. I know, we will not become as sophisticated as a DTP software, that is not the scope of a wiki. But space between images and left/right margins does not look well...

Thanks
Hman
