Description

On a new 21.x install, after light configuration, in page "tiki-admin_system.php" I have a recap of places where files are stored. Two of these places do not actually exist.

This means the features will fail out as activated of the box 🤢

Directories to save
- files/forums/ (Directory is not writeable)
- storage/fgal/ (Directory is not writeable)
- img/trackers
- img/wiki
- img/wiki_up
