Bug report:

**Actions in tracker fields don't post variables**

**Description**

Actions in tracker fields don't post variables though they post parameters
I used the example
Register,post,tiki-register.php,name:login,pass:pass,passAgain:pass,email:email,register=register
from tikiorg but doesn't pass any new user
If I use the syntax Register,post,tiki-register.php,name=login,pass=pass,passAgain=pass,email=email,register=register
it works but it doesn't register variables but words (login, pass etc.)

**Important**

1 low
