Description

Was hard to diagnose...

After upgrading a Tiki20 to Tiki21 I was able to rebuilt the index:

```
[03-03-2020 12:05] Started rebuilding index... logging to file:
/var/tmp/Search_Indexer_mysql_tsaharoniki_tiki21_console.log Unified search engine: MySQL,
version 5.7.26 error: The search index could not be rebuilt. Expression #1 of ORDER BY clause is
not in SELECT list, references column 'tsaharoniki_tiki21.ttif0.value' which is not in SELECT list;
this is incompatible with DISTINCT
```

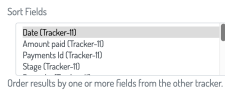

The log:

```
2020-03-03T10:47:35+02:00 ERR (3): WARNING: PDOStatement::execute(): SQLSTATE[HY000]:
General error: 3065 Expression #1 of ORDER BY clause is not in SELECT list, references column
```

'tsaharoniki_tiki21.tti\$

Checking the item (I had to find it!) I found out that having a sort parameter in an itemList field was responsible.

Once removed it worked.

This is very problematic when you have financial data as any report must be ordered (by date).

Update:

Same same in Tiki 20

It may be related to the removal of the "split" function in PHP 7+;

<https://whmcs.community/topic/290945-how-to-sort-smarty-variables-in-whmcs-76/>

Update:

It is now also on Tiki18.8 as it was signaled to me by another Tiki user (tested with him)

I tried to reproduce on the show instance but there is a bug with field list on the trackers and it is not possible to recreate the caches.

Workaround

Unselect field to sort on the itemList field options.
