Description
        When a calculation field is empty it stop the index rebuild operation.

        In the console it throw an none very instructive error:

        □□□□□□□□

        [root@server html]# php console.php i:r --log [04-03-2020 16:20] Started rebuilding index...
        logging to file: /tmp/Search_Indexer_mysql_xxxxx_tiki21_console.log Unified search engine:
        MySQL, version 10.1.44-MariaDB error: The search index could not be rebuilt. Expecting "(" near
        ""

    1. The error should be explicit: Field (permaname and Id) is empty or misconfigured.
    2. The index should jump over and continue

Importance
        3

Easy to solve?
