### Description

When I put a "/" slash at the end of an existing page or a non-existing page, what follows is that the links included in the page no longer point to the root, but take into account the name of the page that precedes the slash. Then all inclusions go through the name of the page.  
You can see this in the image below:

There's a preference `feature_html_head_base_tag` labelled "Add base tag in the HTML head section" on the Look and Feel Control Panel (Miscellaneous tab) that should fix this.  
Should be on by default imho - HTH

Jonny Bradley 23 Mar 20 18:22 GMT-0000

Hi @Adrien

We added version 21.x to the "demonstrate your bug" field here yesterday at the RTM and were a bit confused as to why it doesn't seem to work on this bug report - as it seems fine on others. It looks like you managed to try and create a 21.x instance while we were setting up the server and it went wrong somehow, so the field is blank here for some reason...

If you really need a show instance then please create a new version of this bug and make a new instance there, but as i said in my previous comment above (if i've understood you correctly), it's not a bug - you just need to enable the pref i described before.

HTH
