Description
It is possible in Tiki 21 using the release package
(https://sourceforge.net/projects/tikiwiki/files/Tiki_21.x_UY_Scuti/) to upgrade the composer
packages using
`sh setup.sh`

. It breaking the Tiki.

It should not be possible to use it if official release package is detected.

Comments

Marc Laporte 30 Mar 20 10:11 GMT-0000

What is the error message?

Just to be sure, you mean sh setup.sh updates the packages in vendor_bundled ?

drsassafras 30 Mar 20 12:40 GMT-0000

setup.sh needs to be able to run to set permissions properly. zip files do not preserve permissions, so a better approach here might be to fix the error it is causing.

Marc Laporte 01 Apr 20 03:02 GMT-0000

And given that composer.lock has not changed, I don't understand how running Composer would change anything.

Maybe it's another problem?

Was this a fresh install?
Or a zip that was unpacked over an already running Tiki?

Jean-Marc Libs 02 Apr 20 19:57 GMT-0000

Can't reproduce :

- I downloaded a Tiki 21 zip file from sf.net.
- I unzip it.
- I launch `sh setup.sh` . It correctly detects that this is an official (not vcs powered) Tiki and it correctly suggests "f" then "x". No "c" is suggested as a default option.

I could have typed "f" but that's quite OK, isn't it?

Maybe I fail to understand the issue. Could you explain what issue you encountered before suggesting a fix with little context?
