Voting in a poll gives CSRF warning.

A poll template is created and attached to a page. When the voting in the poll, a CSRF error is given.
Hi,

I was not able to recreate this problem in 21.x. I did the following:
- Created a poll template
- Created a poll that associated the template with a wiki page
- Placed the poll in a wiki page using the poll wikiplugin
- Voted on the wiki page
- Also voted on tiki-poll_form.php

Please let me know how to recreate.
Thanks
