I see an error appearing in the page when I have tracked the master branch and even when I directly clone the master branch.
Now there is no way to install it.
So here is the error:

```
Fatal error: Uncaught Error: Class 'Laminas\Config\Config' not found in C:\wamp64\www\tiki-master\db\tiki-db.php on line 76
```

```

Did you run the sh setup.sh composer command?
