Description
Greetings
I get the following error message when trying to access a forum.

Error
Notice: invalid variable value: $_GET%22comments_parentId%22 = 5-Forum-to-find-projects

I created a new forum after updating to 1.8.5 thinking that it was something to do with upgrading
but it did not help. All my forums are located at

https://www.p-brane.com/nano/forums

They all produce the same error.

Sincerely,
Jay Morreale

Hi
I'm guessing you are talking about version 18.5 not 1.8.5 🛒

I changed the password on your show instance to 12345 but i'm afraid that bug won't be reproducible there as it involved *sefurl* (search engine friendly urls) which show doesn't support...

Try disabling "Display forum thread or forum post title in the search engine friendly URL" on the forum control panel, it seems like something's wrong with sefurl for you (maybe check your .htaccess file is up to date?)

HTH
