Description

Perhaps no one is using copyright management, but it totally doesn't work. The copyrights.php file says it can only be called as an include (and has access checking for that), yet it is in fact called directly by the copyright license page.

Also, there is an access check to see whether the feature is installed that appears to fail completely. As a hack I commented it out to make it work.

Tied to that, the copyright module doesn't work - it looks for "copyrightpage" as the parameter, when the pagename is sent via "page"

I have no idea whether it was broken in 1.9, but looking at the code, I suspect so.

doc.tikiwiki.org is running pre-1.9.8 and has been using Copyright feature for a while... (not broken)

mrisch 19 Aug 07 16:40 GMT-0000
I fixed it a while ago and it was back applied by someone (I think). I will close this.
