Description
The scoring system is untranslatable as a whole.

It relies on labels written in English, and unlike some module parameters, where translators can mock the interface by rendering the translation in the explanation of the parameter, that won't be possible here, so that scoring cannot be translated, and to admins who do not speak English this entire feature/module becomes unusable, because it will be incomprehensible.

My proposal for rebuild with the least amount of work needed is: Prefill with IDs and have the current text be a mere label, but rendered through tra().
