Description

I installed from git a new Tiki22.

Create (externally) the database and populate it with a Tiki21 previous database.

Completed the installation. with the following error:

Accessing to the admin it shows there is an issue with the database.

From ssh using database:update I get an error and I can't neither rebuilt the index:

```
root@ec2-xx-xx-xx-xxx:/home/xxx/public_html# php console.php database:update PDO::query():
SQLSTATE[42S02]: Base table or view not found: 1146 Table 'tsaharoniki_tiki22.sessions' doesn't
exist on line 104 of /home/xxxx/public_html/lib/core/TikiDb/Pdo.php Update completed. Failed:
20200513_expand_sessions_data_column_tiki Queries executed successfully: 3 Error in
20200513_expand_sessions_data_column_tiki ALTER TABLE `sessions` CHANGE `data` `data`
LONGBLOB NOT NULL Table 'tsaharoniki_tiki22.sessions' doesn't exist root@ec2-xx-xx-xx-
xxx:/home/xxx/public_html# php console.php i:r Command not available at this stage. The
database needs to be updated. Solved by: php console.php database:update
```

I compared 2 tikis created at different times.

One that was created before Tiki18 and has a "sessions" table with a data col.
And one created after Tiki19 that doesn't have a "sessions" table.

May be this should be conditioned to the table existence ?
Or if this table is legacy it should be removed (data moved to tiki_sessions ?)

Solution

A core table was missing from the Tiki tables.
