Description
	Make it easier for tracker imports and exports to be used with Excel by adding an encoding option
	to Tabular Formats, which currently only has UTF-8.

	This should be a new dropdown with UTF-8, Windows-1252 and maybe ISO Latin 1 (maybe more)

Importance
	6

Easy to solve?

Just a little word of caution: This might create the need to do full conversions, since UTF-8 is the database's collation, otherwise all sorting could yield "funny" results...

luciash d' being ⬠ 02 Oct 20 15:53 GMT-0000

I wonder why? It's 2020! Is MS Excel not capable of handling utf-8 in 2020?

hman 02 Oct 20 16:23 GMT-0000

Of course it is. But importing could become problematic: You cannot import Windows-1252, Latin-x encoded stuff into a DB with collation set to UTF without fully converting the text before, otherwise you break all sorting features of that DB...
